Since 1987, the United States has celebrated Women's History Month each March to honor and recognize the critical and essential advancements women have made in all areas of society. Matrix Tool has a long history of both supporting and relying on the contributions of women throughout our organization. Over a third of our workforce is comprised of women. They hold key positions in nearly every functional area of the company ranging from Production, Quality Assurance, Customer Service, Purchasing, Planning/Scheduling, Administration & Engineering.

Historically, the Plastics Engineering field has had difficulty attracting women to pursue this area of specialized study. Fortunately for Matrix Tool and for our general area, the Penn State Behrend Plastics Engineering Program has been able to break through this paradigm.

Matrix has actively partnered with the Plastics Engineering Program by offering internships and/or hiring graduates who have acquired their Plastics Engineering degree through the Penn State program. Matrix Tool currently has three women Plastics Engineers on staff. A fourth, who is finishing up her internship in May, will be joining Matrix at the conclusion of her studies.

Overall, Matrix has over a dozen degreed Plastics and Mechanical Engineers on staff—of which, 30% are women. They fill diverse roles such as Plastics Project Engineer, Plastics Quality Engineer and RJG Process Engineer.

“The vast majority of the work we do at Matrix Tool is technically sophisticated and very challenging,” said Tim

Lewis, President of Matrix Tool.

He added, “These women are key contributors in every department they work in. It’s both gratifying and essential that Matrix continue to attract these high caliber candidates to join our team.”

We are proud of all our employees. During the month of March, we salute our female engineering staff, as well as all the women of Matrix Tool, for their contributions to our success!
