

New Press Day!

It's new press day! We have added another 20-ton Sodick machine to our Small Parts Molding (SPM) room to help support our current business growth. This purchase brings us to a total of (11) state-of-the-art injection molding machines from our manufacturing partner Sodick IMM by Plustech Inc. It is outfitted with a high-speed Yushin top entry robot and automation cell to match the rest of our Sodick machines. Our SPM room utilizes (10) state-of-the-art, 20-ton Sodick Injection Molding Machines. In addition to standard componentry, this press will further enhance our capability to mold high precision micro and micro-featured product with higher cavitation and less waste.

Keep an eye on our LinkedIn Page and/or website for an in-depth write up about our SPM room and our always-expanding high precision, micro molding and micro tooling capabilities.

For additional info on our micro tooling and micro molding capabilities please contact Matrix Tool Inc.
